### Project Narrative

This project helped a minimum of 15 landowners within Lake of the Woods County replace previously identified Imminent Health Threat (IHT) Subsurface Sewage Treatment (Septic) Systems. Imminent Health Threat systems are those that are discharging improperly treated human waste onto the ground surface or into surface waters. In addition to the potential water quality impacts, untreated sewage has the potential to introduce bacteria and viruses into the environment. When IHT systems are identified, county or city staff will work with the homeowners on the process required to bring their systems into compliance with the septic ordinance. Low-income households are eligible for grant assistance from the Clean Water Fund to solve Sub-Surface Treatment Systems identified as Imminent Health Threats because of surface discharge or direct connection to surface waters.
