

Restoration & Monitoring

m BOARD OF WATER AND SOIL RESOURCES

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

1

Overview

- General considerations for successful restoration
 - MN Restoration Guide
- Restoring natural hydrology
 - Hydrogeomorphology
 - Landscape position
 - Hydrology
 - hydraulics
- Restoration techniques
 - Filling ditches
 - Removing drain tile
 - Rerouting & pump removal
- Establishing vegetation
- Monitoring
 - Timelines
 - Roles and responsibilities
 - Interpreting hydrology and vegetation monitoring data

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

2

Wetland Restoration

- [Wetland Restoration](#)

3

Why restore wetlands?

- Restore lost functions:
 - Wildlife habitat
 - Water Quality
 - Flood Attenuation
- Wetland Banking
- CRP/RIM
- Enforcement

4

Setting function-based restoration goals and performance standards.

Establishing Goals & Measurable Outcomes:

- Restore natural hydrology
- Reestablish native plant community to site
- Performance Standards (banking)-measurable attributes to determine if restoration goals are met

5

MN Wetland Restoration Guide

MN Wetland Restoration Guide:

- Planning
- Site Assessment
- Design and Construction
- Vegetation establishment
- Site Management & Monitoring

6

Technical Guidance Sheets

- Supplements to the MN Wetland Restoration Guide
- <https://bwsr.state.mn.us/guidance-documents-tools-and-other-resources>
 - Vegetation Establishment
 - Restoration Design and Construction
 - Managing Restoration Sites

7

General considerations for wetland restoration

- Identifying and selecting projects
 - Restoration over creation
- Consider potential complications from degraded sites
- Adjacent land uses (present and future?)
 - Changes to adjacent landowners?
- Location of area ditches
 - Public or private?
 - Drainage Law?
- Understand soil conditions of site (permeability, chemistry)
- Water quality

8

Hydrologic design considerations

Restoring natural hydrology:

- Hydrology
 - Precipitation, evapotranspiration, surface and groundwater inflow & outflow
- Hydraulics- how water flows
 - Unidirectional, bi-directional
- Landscape position
 - Surface shape
- Outlet structures
 - Location and size

9

Landscape position

Other considerations:

Understand the hydrogeomorphic position

- Landscape position
- Hydrology (inputs & outputs)
- Hydraulics (how water is moving)

10

Drainage Modifications

Drainage Manipulation Strategies:

- Ditches
- Tile
- Rerouting

- Restoration "reverses" modifications
- Don't over-engineer structures
 - Restore natural hydrology

11

Ditches and Drain Tile

Ditch design considerations:

- Cross section area
- Depth
- Grade
- Outlet

Tile Design considerations:

- Tile size
- Depth
- Spacing grade
- Material
- Outlet

12

Drainage Restoration Methods

- Filling ditches
- Removing tile
- Re-routing

Figure 2. Tile Block Location for P. Depressional Wetland

13

Blocking and Filling Surface Ditches

Design Considerations:

- Ditch fill
 - Length
 - recontouring
- Ditch plugs for depressional, non-depressional, sloped wetlands
- Project boundaries/property lines

[Blocking and Filling Surface Drainage Ditches Technical Guidance Document](#)

14

Blocking and Removing Subsurface Tile

- Design Considerations:
 - Tile block construction
 - Strategies to protect upstream land
 - Length, location, number of blocks (depressional vs sloped wetlands)

• [Blocking Subsurface Drainage Tile Technical Guidance Document](#)

15

Rerouting Drainage Systems

• Rerouting Drainage Systems

- Outletting incoming drainage directly into planned wetlands
- Rerouting drainage to avoid planned wetlands
- Removing/Relocating Pumps
- Design Considerations:
 - Wetland type, location, elevations, topography, adjacent land uses

Figure 3. Drainage Tile Rerouted Around a Restored Wetland

16

Outlets

Design Considerations:

- Location
- Elevation
- Size

[Outletting Drainage Systems](#)

- Types of outlet structures
 - Surface drainage
 - Rock riprap outfalls
 - Weir
 - Control elevation
 - Subsurface tile outlets
 - Several plastic pipe options
 - Consider perforated or non-perforated

17

Vegetation establishment considerations

General strategies:

- Strategic site preparation
 - Planting elevation, water depth, soil type
 - Flooding frequency, duration
- Make landscape connections
- Match plant communities to site
- Restore and maintain plant diversity
 - Work with ecological variability
- Selecting seed mixes and plants
 - Species tolerance
- Manage Invasive species throughout entire site

18

Developing a vegetation plan

- Consider topography and elevations to promote natural hydroperiods for plant species and communities
- [Native Vegetation Establishment and Enhancement Guidelines](#)
 - Comprehensive Guidebook

19

Selecting seed mixes and plants

- [State Seed Mixes lists](#)
- Grassland mixes (NW, SW, SE)
- Woodland mixes (S&W, Central, NE, NW)
- Wetland mixes (NE, South & West)

20

Managing Restoration Sites

- [Technical Guidance Documents](#):
 - Herbicide application
 - Prescribed burning
 - Mowing, grazing & haying
 - Water level management (flooding & drawdown)
 - Plant Care
 - Inspecting and maintaining outlet structures
 - Animal Control

21

Wetland Bank Monitoring

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

22

Overview of Wetland Bank Monitoring

- Monitoring process
 - Construction Certification
 - Duration of monitoring
 - Deposit of Credits
 - Maintenance responsibilities
 - Monitoring reports
 - Timeline
 - Reports
 - Corrective Actions
- Hydrology Monitoring
 - Performance standards
 - Vegetation Monitoring
 - Performance standards

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

23

General Monitoring roles once wetland bank is approved

- | | |
|--|--|
| <p>LGU roles:</p> <ul style="list-style-type: none"> • certify construction • certify credits for deposit • review monitoring reports • may require corrective actions as needed | <p>Sponsor/landowner roles:</p> <ul style="list-style-type: none"> • Sponsor responsible for maintenance • Submitting as-built documentation • Submitting wetland credit deposit transaction form(s) • Submitting monitoring reports • Paying administrative fees |
|--|--|

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

24

Construction Certification

- LGU must certify the initial construction

- Documentation:
 - as-built drawing
 - surveyed map
 - Delineation
 - seed tags
 - construction photos

- Site Visit with TEP
 - Recommend TEP Findings of Fact

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

25

Monitoring Schedule

- Monitoring must begin no later than first full growing season after construction certification
- Must continue for at least 5 full growing seasons
- If unsuccessful, the LGU may extend the monitoring period (<5 additional years)
- Actual monitoring schedule may vary for different bank types (restoration vs preservation)

Wetland Bank Type	Monitoring Start	Monitoring End	Monitoring Frequency	Monitoring Method	Monitoring Personnel	Monitoring Equipment	Monitoring Location	Monitoring Notes
Shallow Marsh	7/1/2015	6/30/2020	Annual	Visual Inspection	TEP	GPS, Camera	Site 1, 2, 3, 4, 5	...
Hardwood Swamp	7/1/2015	6/30/2020	Annual	Visual Inspection	TEP	GPS, Camera	Site 1, 2, 3, 4, 5	...
Wet Meadow	7/1/2015	6/30/2020	Annual	Visual Inspection	TEP	GPS, Camera	Site 1, 2, 3, 4, 5	...

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

26

Performance Standards

- Performance standard: observable or measurable physical (including hydrological), chemical and/or biological attributes that are used to determine if a compensatory mitigation project meets its objectives.

Examples:

- Vegetation
 - "85% of the site is vegetated by planted species and/or regenerated species as per approved plan by end of 5th complete growing season."
- Hydrology
 - "Hydrology must meet wetland definition of 1987 Corps of Engineers Manual with saturation to the surface of the soil for at least 31 days of the growing season."

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

27

Monitoring Report

- Submitted following the first full growing season no later than 12/31
- Then submitted as per approved bank plan
- May include Form to Wetland Credit Deposit Transaction Form

- Contents of the report:
 - Project location map
 - Description of performance standards
 - Activities completed and planned
 - Hydrology measurements
 - Plant communities map
 - Color photographs
 - Other information specified from approved plan

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

28

Vegetation

- Methods to monitor vegetation:
 - FQA
 - Mapping plant communities
 - Estimating invasive species

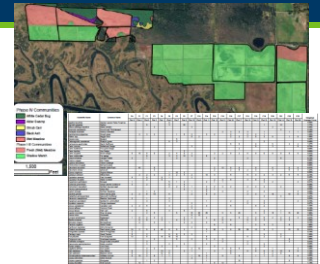

Table 1: Summary of Wetland Success Criteria for Phase I

Success Criteria	Phase I		
	Wet Meadow	Hardwood Swamp	Shallow Marsh
Duration			
Growing Seasons	5	4	5
Hydrology			
Hydrology (depth to water table)	Surface to -32"	Surface to -32"	16" to -12"
Hydroperiod (duration within zone)	Meets duration	Meets duration	Meets duration
Vegetation			
Wetland Indicator (% FAC or wetter)	41/52 = 79%	39/51 = 76%	20/22 = 91%
Species Composition (Shannon Richness)	20/52 = 38%	30/51 = 59%	19/22 = 86%
Invasive Cover (% non-native)	2%	0%	2%
FQA/WFGA	20.2/26.7	20.0/21.4	16.9/19.7
Tree Coverage (trees per acre)	N/A	26.48	N/A

29

Interpreting Vegetation

- Vegetation measurements to consider:
 - Percent absolute cover of bare ground/open water
 - % relative cover of native, non-invasives
 - % relative cover of non-native, invasives
 - % relative cover of hydrophytes
 - Plant species richness

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

30

Reviewing Monitoring Reports

A. Success Criteria Summary
Summary of Success Criteria Standards and Current Metrics for 2017.

Metric	Success Criteria	Measured Criteria	Success Criteria Met?	Comments
Hydrology - Standards used for 2017 - 2018				
Duration	Water saturation 6 inches above and one foot below ground surface	Measured hydrology is between 6 inches above and one foot below ground surface	Yes	Annual hydrology monitoring was required for 2017. Review based on field site observations
Duration	Minimum of the growing season	Hydrology was within the allowed range for the majority of the growing season	Yes	
Vegetation				
Diversity	Minimum of five native species	Five native species have been observed	Yes	Species diversity increased from 2016 to 2017
Composition	Minimum five graminoid and two sedges	Eight graminoid and eight graminoid species have been identified	Yes	Sedges composition stable
Invasive Species Coverage	No more than 10% total cover	Total cover of invasive species is less than 10%, and has been effectively controlled	Yes	Small canopy grass is less than 1% coverage
Invasive Species Concentration	No single areas greater than one-quarter acre in size	Invasive species remain under control with no single area greater than one-quarter acre in size	Yes	Single tree cover of along ditches, but ignored again in Feb 2017 as control

• **Group exercise? (One report meets criteria, one parameter doesn't meet criteria)**

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

31

Credit Deposits

- Up to 15% of the credits are eligible for deposit after the certification of construction
- Remaining credits are eligible for deposit based on the credit release schedule and performance standards in the approved bank plan
- Subject to review by the LGU & TEP
- After certifying the credit for deposit, the LGU must forward to BWSR banking administrator

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

32

Corrective Actions

- If, during the monitoring period, the LGU or TEP determine that a bank site does not meet the approved plan's specifications, the LGU must require corrective actions
- BWSR can freeze accounts by restricting deposits, withdrawals, transfers until the LGU determines the site is in compliance
- Noncompliance of bank sites is subject to enforcement procedures

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

33

Review

General considerations for successful restoration

- Restoration over creation, degraded sites, adjacent land uses, soil conditions, water quality, other drainage features, landownership
- Restoring natural hydrology
 - Understand the landscape position, hydrology, hydraulics
- Establishing vegetation
 - Strategic site preparation, landscape connections, match plant communities to site, plant diversity, work with ecological variability, species tolerance, manage invasive species
- Restoration techniques
 - Filling ditches, removing drain tile, rerouting & pump removal

Performance Standards

- Measurable attributes to determine if restoration goals are met
- Monitoring Reports
 - Hydrology monitoring
 - Monitoring wells
 - Interpreting data
 - Vegetation monitoring
 - Interpreting data
- Use available technical guidance!

BWSR Wetland Section | www.bwsr.state.mn.us/wetlands

34

Wetland Banking

m BOARD OF WATER AND SOIL RESOURCES

35

Overview

- Purpose of Wetland Banking
- Types of Wetland Banks
- Actions Eligible for Credit
- Establishing a Wetland Bank
- Certification and deposit of credits
- Withdrawals and transfers
- Replacement for Public Road Projects

Banking-related topics covered in other sections:

- Restoration Construction Standards
- Monitoring and Corrective Actions

36

Wetland Bank Guidance and Information

- [Wetland Bank Guidance and Information](#)

37

Purpose

What is Wetland Banking?

- WCA rule: "The purpose of the state wetland banking system is to provide a market-based structure that allows for replacement of unavoidable impacts with pre-established replacement wetlands."
- Federal Mitigation Rule definition (33 CFR 332.2): "A mitigation bank sells compensatory mitigation credits to permittees whose obligation to provide compensatory mitigation is then transferred to the mitigation bank sponsor."
- NRCS website: "Wetland Mitigation Banking is a form of Environmental Market trading where wetlands are developed to create marketable wetland credits (acres and function). These credits are sold to others as compensation for unavoidable wetland impacts."

38

Bank types

- Private
 - Standard- Landowners establish bank on private land to mitigate impacts on non-ag or transportation projects
 - Agriculture- Credits can only be used for Ag projects
- In-lieu Fee (proposed)
 - Open to only government and NGOs, mitigation completed in advance, requires compensation planning framework
- Local Government Road Wetland Replacement Program
 - Replaces impacts resulting from local transportation projects

39

Quick facts on ILF (as proposed)

Minnesota In-Lieu Fee Program

A program in which wetland replacement requirements are satisfied through payment of money to the board or a board-approved sponsor to develop replacement credits according to section 103G.2242, subdivision 12. (Minn Stat.)

In-lieu fee versus banking, major differences

- Mitigation is completed in advance with banking, after sale of credits with ILF
- Banking is for profit, ILF is open only to government and NGOs
- Corps is involved in finances with ILF, no involvement in banking
- ILF requires development of a compensation planning framework for program approval, banking does not

40

Quick facts on Ag bank

Eligibility to USE the Ag Bank:

- ✓ The wetland must be proposed to be drained for agricultural use.
- ✓ The land must remain in agricultural use.
- ✓ The wetland must be a farmed wetland (FW) or otherwise degraded wetland on existing agricultural land.

Differences with Standard Bank:

- Credits can only be used for Ag projects
- Flexibility on Vegetation Standards
- Expired CRP sites could be eligible "as-is"

41

Local Government Road Wetland Replacement Program

- WCA exempts certain local road projects from State wetland replacement requirements
- BWSR is required to replace the associated wetland impacts so the local governments don't have to
- These wetland credits also satisfy Corps of Engineers' Section 404 permit requirements

42

What projects Qualify?

- **Repair, rehabilitation, reconstruction or replacement of currently serviceable** existing State, City, County or Town public road.
 - Provided that:
 - Project minimizes impacts
 - Plans are provided to the LGU
- What doesn't qualify?
 - New roads
 - Roads expanded solely for additional capacity lanes

43

Reviewing Local Road Projects

44

Joint Application Form

- For Local Road Projects:
- Parts 1-5; Attachments C and E
 - May need Attachment D if there will be impacts that do not meet the Local Road Program eligibility requirements

45

Application Requirements

- Local Road Unit should provide TEP the following:
- Project plans depicting wetland boundaries
 - Description of wetland impacts by type
 - Information demonstrating wetland impact minimization
 - Only one alternative is required

46

Good Example

MnDOT's Road Design Manual (2000) also recommends turn and/or bypass lanes for rural undivided roadways with traffic volumes over 1,500 ADT and speed limits above 45 mph. Current road condition compared with required and proposed are laid out in the table below.

	Existing	Required	Proposed
Lane Width (ft)	12	11-12	12
Shoulder Width (ft)	0-6	8	8
In-Slope	1:4	1:4	1:4

This project is proposed to improve CSAH 18 to meet today's State Aid Standards and improve safety along the corridor.

47

Attachment E – Joint Application

Project Name and/or Number: _____

Attachment E Local Road Replacement Program Qualification

Complete this part if you are a local road authority (County Highway Department, City, Transportation Department, etc.) leading activities that are part of a project or portion of a project eligible for the Local Road Replacement Program Qualification. If portions of your project are not eligible for the LRRRP, then Attachment D should be completed and submitted with your application.

Describe how your project is a repair, rehabilitation, reconstruction, or replacement of a currently permissible road to meet functional design or other transportation requirements. Impacts shall specify the specific road activities and how the project will address them. Attach supporting documents and information as applicable.

Provide a map, plan, and/or aerial photograph accurately depicting wetland boundaries within the project area. Attach accurate delineation information (report or otherwise) upon the wetland(s) upon which impacts will occur. Also attach and describe any type of erosion or sediment control boundaries or other aspects of the project that a reader or reviewer of the local Road Design Manual (2000) or Corps of Engineers.

In the below table, identify only the eligible impacts from Part 4 that the local road authority has determined should qualify for the LRRRP.

Material removed or added on roadbed areas	Tree removal (E), removal, work	Use of gravel (S) or other TPO	Existing Road Cross-section Specific Impact?	Other Road Rehabilitation and Road Service Area of Impact?

Have additional notes and please identify: Year of installation and duration ("N" as needed) with both date and "N" where "N" represents total service life in years (with both date and "N").

48

Actions Eligible for Credit

- Restoration of completely drained wetland
- Restoration of partially drained wetland
- Vegetative restoration of farmed wetlands
- Protection of wetland previously restored via conservation easements
- Wetland Creations
- Restoration and protection of Exceptional Natural Resource Value
- Preservation of wetlands
- Upland buffer areas

49

Actions Eligible for Credit 8420.0526

Subpart	Action
2	Buffer
3	Restoration, Completely Drained or Filled
4	Restoration, Partially Drained or Filled
5	Vegetative Restoration of Farmed Wetland
6	Protection of Wetlands Previously Restored
7	Wetland Creation
8	ENRV
9	Preservation

50

Establishing a Wetland Bank

State and Federal Review Process in Minnesota

- Draft Prospectus
 - State: Optional
 - Federal: Optional
- Prospectus
 - State: Optional
 - Federal: Required
- Mitigation Plan/Draft MBI
 - State and Federal: Required
- Final Mitigation Plan and MBI
 - Federal only and required

51

Roles in Establishing a Wetland Bank

52

Draft Prospectus

- Optional
- No decision required
- Help sponsors
- Complex or difficult projects
- Minimal investment

53

Draft Prospectus

- Basic project information
- Easement questionnaire
- Basic Features
- Why is it a good bank project
- Constraints
- Existing wetlands

54

Draft Prospectus

- BWSR provides “Discussion Items”
- WS uses discussion items at TEP meeting
- TEP writes Findings based on discussion
- Sponsor receives TEP findings and decides what to do

55

Prospectus

- Required by Corps
- No decision required
- Baseline Information
- Justify Credit Actions
- Justify Credit Allocation
- General Concept Plans

56

Prospectus

- Crediting
- Topographic Information
- Wetland Determination
- Title Opinion
- Site Hydrology Information

Map ID	Credit Action 2	Acres 3	Credit Allocation			
			Minimum Credit 4	% Credit	Maximum Credit 5	Allocation Credit 6

57

Roles for reviewing prospectus

TEP/LGU Roles:

- Verify previous comments addressed
- Verify sponsor adequately described the site
- Review wetland delineation or determination
- Review crop history (if necessary)
- Provide LOCAL perspective on project and eligibility

BWSR Role:

- Evaluate easement issues
- Vegetation, Engineering, and Bank Coordinator comments included
- Statewide consistency
- Technical answers and interpretations
- Coordination with Corps

58

Prospectus

- Comments become more direct
- Baseline information must justify credit actions and allocations
- Some credit actions require more information
- Project takes shape but detailed plans not required
- Balance information needs versus sponsor's cost

59

Mitigation Plan

- Document of record
- Required for both programs
- LGU Decision Required
- Section 15.99 time limits!
- Attached to Corps' MBI

60

Mitigation Plan

Required:

- Detailed vegetation plans
- Detailed construction plans
- Detailed monitoring plans
- Performance standards
- Credit release schedule

61

TEP Review

- Verify Corps has completed Prospectus phase
- Verify Prospectus information carried forward and comments addressed
- Verify Baseline Information is complete and adequate
- Wetland delineation approval
- Review detailed plans to your comfort level

62

Mitigation Plan

"Plans are nice but performance releases credits." J. Overland

- Monitoring plan must relate to performance standards
- Performance standards must relate to credit releases
- The Mitigation Plan is the basis for implementation, credit releases, and allowable actions into the future
- DOCUMENTATION IS CRITICAL

Table 1 Credit Release Schedule Summary

Phase of Construction	Total Project Release	Phase of Project Release	Phase of Project Release	Phase of Project Release	Phase of Project Release	Phase of Project Release	Phase of Project Release	Phase of Project Release	Phase of Project Release
Pre-construction	1.0	100%	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000
Construction	10.0	10%	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000
Post-construction	1.0	10%	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000	1.0000
Total	12.0		3.0000	3.0000	3.0000	3.0000	3.0000	3.0000	3.0000

63

Mitigation Plan Decision

- Track 15.99 time limits, extensions needed
- Most Mitigation Plans will require some revision
- Make final decision in accordance with section 15.99
- Clearly identify and retain approved Mitigation Plan
- When possible the WCA and Corps approved plans should be the same

64

Easement Acquisition

GENERAL PROCESS INFORMATION

- Easement acquisition is typically initiated after mitigation plan approval
- Easement acquisition does not have to be completed prior to construction
- The process is managed at BWSR by Easement Section Staff, not Wetland Specialists
- It is the responsibility of the sponsor/landowner to initiate the easement acquisition process

65

LGU role in Easement Acquisition

- Help the sponsor find the "Conservation Easement Acquisition Overview for Private Wetland Banks"
- BWSR easement staff will take it from there

66

Easement Acquisition

The significant steps in the easement acquisition process include:

1. Sponsor submits initial \$1,000 Easement Acquisition Fee to BWSR along with application
2. BWSR performs a preliminary review of ownership information to identify potential issues
3. Sponsor provides DRAFT Certificate of Survey in required format for BWSR review & comment
4. BWSR provides sponsor with instructions to obtain Title Commitment
5. Sponsor (landowner) provides Title Commitment to BWSR for State Attorney General (AG) review & comment
6. BWSR prepares Conservation Easement document to be signed by landowner
7. Landowner signs Easement and returns to BWSR with \$2,400 Easement Acquisition Fee balance
8. BWSR sends instructions to record the Easement and issue a Title Insurance Policy
9. BWSR notifies sponsor that easement acquisition process is complete

67

Construction Certification

• LGU must certify the initial construction

- Documentation:
 - as-built drawing
 - surveyed map
 - Delineation
 - seed tags
 - construction photos

• Site Visit with TEP

- Recommend TEP Findings of Fact

68

Credit Deposits

- Up to 15% of the credits are eligible for deposit after the certification of construction
- Remaining credits are eligible for deposit based on the credit release schedule and performance standards in the approved bank plan
- Subject to review by the LGU & TEP
- After certifying the credit for deposit, the LGU must forward to BWSR banking administrator

69

Credit Withdrawal and Transfer

- Submitted as part of Replacement Plan to LGU with jurisdiction of impact site
- Reviewed and approved by the LGU with TEP input
- Processed and entered into official ledger by BWSR
- BWSR coordinates approved transactions with Corps

70

Credit Transactions

Help us improve transaction processing efficiency.

Make sure all requested information is provided

Make sure account information is provided and each column is filled out

Don't worry about fees – BWSR will handle that

71

Credit Transactions

Transaction forms cannot be processed without required signatures

When processing transactions we need LGU name and contact. Typed or printed information makes it easier to figure out

72

Review

- Types of Wetland Banks
 - Standard
 - Private and Agriculture
 - In Lieu of Fee (proposed)
 - Local Road Program
- Replacement for Public Road Projects
 - Repair, rehabilitate, reconstruction of currently serviceable roads
- Actions Eligible for Credit
 - Restoration of drained wetlands, vegetation restoration, protection, ENRV, Preservation, upland buffer
- Establishing a Wetland Bank
 - Draft Prospectus
 - Prospectus
 - Mitigation Plan
- LGU and TEP procedures for banking
 - Construction Certification, deposit of credits, withdrawal of credits

73

Aerial Photo Interpretation

m BOARD OF WATER AND SOIL RESOURCES

MWFCP Training 2021 | bwsr.state.mn.us

74

Overview

Expert, I helped write the guidance.

What is the off-site method?

75

Overview

Easy

76

Overview

A Little Harder

77

Overview

Harder Still

78

Overview

What the ?

79

Overview

Inherent difficulty with wetlands on ag. land:

- They often lack a natural plant community
- Their soils are disturbed by cultivation
- Their hydrology is often altered either directly (ditches, tile, diversion) or indirectly (tilling patterns, evaporation and transpiration from exposed soils and intensive cropping).

80

Overview

- 17 Manual Definitions:
- Normal Circumstances
 - Atypical area
 - Problem area

- Midwest and NC/NE require aerial review per Chapter 5:
- "Agricultural lands"
 - "Wetlands that periodically lack indicators of wetland hydrology"

81

Overview

"Findings suggest that aerial image interpretation provides a useful, but conservative approach to identifying areas of wetland hydrology..."

82

Guidance

US Army Corps of Engineers®
St. Paul District

July 1, 2016

Guidance for Offsite Hydrology/Wetland Determinations

This document replaces all previous Minnesota Board of Water and Soil Resources (BWSR) and St Paul District Corps of Engineers (District) published guidance on offsite hydrology/wetland mapping conventions.

83

Guidance

- Always use all* imagery in putting the pieces together, and place greatest reliance on more recent years; they tend to best reflect current conditions.

*Use only high quality/good resolution slides. Much better to focus on image quality than normalcy of antecedent conditions.

84

The evolution of aerial photo review

85

Guidance

Moving away from FSA images 1979 – 2000
Using more recent and clearer images: 5 normal years

86

Guidance

Vigor and stress responses to wetland conditions

87

Evaluating Images

Signatures:

- CS: Crop stress
- DO: Drowned Out
- NC: Not cropped
- SW: Standing water
- NV: Normal vegetative cover
- NSS: No soil wetness
- AP: Altered pattern
- SS: Soil wetness signature
- CS/DO... (can have multiple, use the /)

Wetland Signatures are a positive "hit"

88

Evaluating Images

Crop Stress (CS)

89

Evaluating Images

Drowned Out (DO)

90

Evaluating Images

NC – not cropped.

91

Evaluating Images

Standing Water (SW)

92

Evaluating Images

AP – altered pattern

93

Evaluating Images

WS – wetland signature.

94

Evaluating Images

Normal Vegetative Cover (NV) or No Soil Wetness (NSS)

95

Evaluating Images

Soil Wetness Signature-SS

- In Bare soil images, dark, or wet-appearing photo tone from early growing season
- May even include some standing water
- Note the drift lines around the edge of the basin

96

What signature(s) do you see?

Crop Stress (CS)	
Drowned Out (DO)	
Not Cropped (NC)	
Standing Water (SW)	
Altered Pattern (AP)	
Wetland Signature (WS)	

97

125

Other uses

Level 1 Delineations

Delineation Method	Review of offsite mapping resources	Site Visit	Sampling Approach	Complete Field Data Forms	Field Staking of Wetland Boundaries
Routine Level 1	Yes	Sometimes	Offsite	No	No
Routine Level 2	Yes	Yes	Onsite, qualitative	Yes	Yes
Comprehensive	Yes	Yes	Onsite, quantitative	Yes	Yes

WCA Application Type Examples	Commonly Used Delineation Method
Temporary impact under No-Loss	Routine Level 1
Banking application: pre-application scoping	Routine Level 1
Banking application: full application	Routine Level 2
Road Program Wetland Impact Documentation—Road project through a large contiguous wetland	Routine Level 1
Road Program Wetland Impact Documentation—Scattered wetlands within construction corridor	Routine Level 2
Replacement plan	Routine Level 2 or Comprehensive
Enforcement actions	Routine Level 2 or Comprehensive
Wetland boundary approval (no project application)	Routine Level 2
Agricultural exemption determination (8420.0420, Subpart 2A)	Routine Level 1

126

127

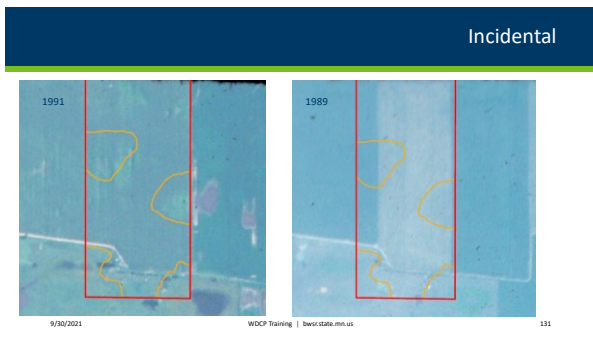

128

129

130

131

132

Final Point

- Except for Level 1 delineations, the results of aerial imagery review are not necessarily the final determination.
- Other data to support conclusions.
- Results do not override site specific data (Level 2, etc).

138

138

Take Good Field Notes

139

What to Record

- Plant communities
 - Describe and sketch on aerial photograph
- Landscape settings
 - Topographic changes from wetland to upland
 - Gradual, abrupt?

- Vegetation
 - Dominant veg
 - changes from wetland to upland
- Soil
 - Changes from wetland to upland
 - Textures, Colors
- Hydrology indicators
 - Changes from wetland to upland

140

What to Record

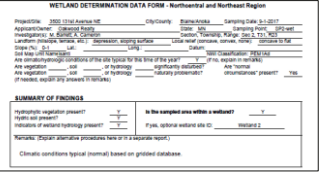

- Wetland type
(Circular 39, Cowardin, Eggers & Reed)
- General site description
 - Buildings, ditches, culverts, etc...
- Field conditions
 - Raining, temperature, drought, etc.

141

Notes on Field Notes (cont.)

- Note taking skills improve with experience as you figure out what is important and what is not
- Take time to organize, refine, and augment field notes immediately following your field visit.
- Label and organize photos so you know where you took them and what they are intended to show.

142

Marking Wetland Boundaries

- Mark with:
 - Flags, lath, whatever works.
 - Will vary depending on situation.
- Locate via GPS or land survey methods (find out local requirements).
- Wetland boundaries marked

143

US Army Corps of Engineers®

Guidance

March 4, 2015

Guidance for Submittal of Delineation Reports to the St. Paul District Army Corps of Engineers and Wetland Conservation Act Local Governmental Units in Minnesota, Version 2.0

Introduction - Purpose and Background of 2015 Guidance

This guidance provides specific standards and expectations for conducting wetland delineations and submitting wetland delineation reports for regulatory purposes in Minnesota. It supplements and explicates information in the 1987 Corps of Engineers *Wetland Delineation Manual* (Manual) and applicable regional supplements. In 1996, the Corps of Engineers (the Corps), St. Paul District Regulatory Branch issued *Guidelines for Submitting Wetland Delineations to the St. Paul District Corps of Engineers and Local Units of Government in the State of Minnesota* jointly with the Minnesota Board of Water and Soil Resources (BWSR). Significant improvements to the application of the science behind wetland and riparian systems delineation have been made since 1996, and this guidance reflects those improvements.

145

Introduction

- Who did you do this for?
 - Developer, public entity
- Where is the project
 - General location and size of project area
 - General description of plant communities: Wooded, meadow, urban etc...
- Why are you doing it?
 - Identify wetlands on potential development site
 - Identify wetlands in road corridor
- When did you do it?

146

Methods

- Level 1 or 2?
- Off site aerial review?

- Problem area or atypical procedures?

147

RESULTS and Discussion

Describe wetlands AND uplands

- Wetland Type – Circular 39, Cowardin, Eggers & Reed
- Dominant Vegetation for each community/type

148

Text Examples

Wetland Type &Vegetation:

“Wetland 1 is a Type 3 (PEMC/F) with an interior shallow marsh community surrounded by a fringe of wet meadow.

Dominant vegetation in the shallow marsh includes broadleaf cattail, and water plantain.

The wet meadow fringe include reed canary grass, with a few scattered willow shrubs.”

149

Text Examples

Soils:

“Soils in the wetland consisted of a deep layer of organic sapric material overlying fine sand consistent with the mapped soil unit. Indicator A1 (histosol) was observed in the wetland.

Adjacent upland soils lacked the organic surface layer and consisted of high chroma loamy fine sand over sand. No hydric soil indicators were observed in the upland.”

150

Report Components – Figures

- 1. Site Location
 - 2. National Wetland Inventory (NWI)*
 - 3. Soils
 - 4. Public Waters Inventory (PWI)*
 - 5. Wetland Boundary Map
- *often combined

151

151

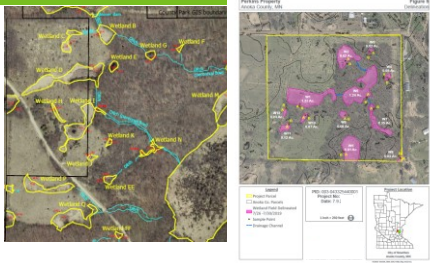

Report Components – Maps | Site Location

152

152

Identify all aquatic resources

153

154

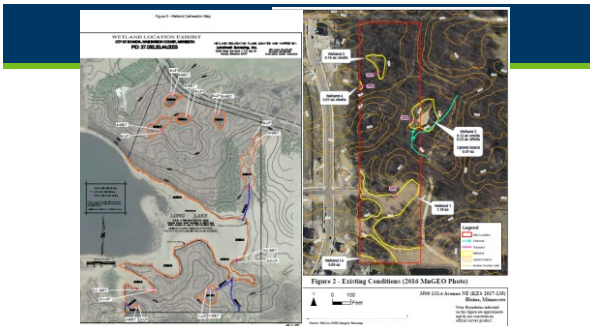

155

Reports

156

157

158

Data Forms

- Completely filled out
- Correspond to sample locations indicated on a map
- Remember that sample locations should be representative
- Not needed if doing a Routine Level 1
- Do a complete job, but keep in mind that these are field assessments, not a scientific study, spend a reasonable amount of time.

159

Field Review

- Who should conduct site review?
- At least 1 member of TEP
 - LGU may request assistance from TEP (SWCD and BWSR) or other tech. prof.
 - Corps invited/coordination
 - Delineator invited (but does not need to be present)

160

Non-Routine Wetland Delineations

- Informal Delineations
- Landowner wanted to fill an area mapped as non-hydric soil
- Site visit to estimate and stake wetland boundary

161

162

What is a Wetland?

Definition: Those areas inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of **vegetation** typically adapted to life in saturated soil conditions.

Hydrology + Vegetation + Soil = Wetland

163

3-Parameter/ Indicator Approach

1. **Soils**—Historic conditions, may not reflect current condition.
2. **Hydrology**—Current condition, but heavily influenced by recent climate conditions
3. **Vegetation**—Somewhere between

The 87 Manual requires 3 parameters because no one source typically gives the answer in all situations

164

Land Resource Regions

- **Regions dictate which indicators are used and how they are used**

- a) The indicator descriptions in this guide are abbreviated versions of the full descriptions found in the Regional Supplements to the Corps of Engineers Wetland Delineation Manual (Great Plains, North-Central/North-East, Midwest).
- b) An indicator is applicable statewide unless otherwise indicated below the indicator description.

165

Land Resource Regions

- **Regions dictate which indicators are used and how they are used**

166

Wetland Delineation Types

ROUTINE

- **Level 1** - Onsite Inspection Unnecessary
- **Level 2** - Onsite Inspection Necessary
- **Level 3** - Combination of Levels 1 and 2

167

Sampling Location Should Be Representative

- Representative of soil changes (from upland to wetland)
- Representative of vegetation changes
- Representative of hydrology indicator changes
- Representative of landscape changes

168

Critical Definitions

- Wetlands
- Growing Season
- Atypical Situations
- Problem Areas
- Normal Circumstances

169

Wetland Classification Systems in MN

- Circular 39
- Cowardin et al.
- Eggers & Reed
- Hydrogeomorphic Method

170

Wetland Functions & Values

Wetland Functions: in scientific assessments means natural processes

Wetland Value: wetland goods and services providing monetary or social welfare benefit.

171

Wetland Functions

- Act as a natural "filter" to maintain water quality
- Facilitates infiltration recharging groundwater
- Stabilize base flow
- Decreases fluid velocity during high flow events which decreases turbidity
- Storm water retention (i.e. storage)
- Provides habitat
- Shoreline protection

179

Web Soil Survey

Map Unit Number	Map Unit Name	Area in Acre	Percent of AOU
0100	Shallow, heavy, silty, clayey, m. phase, 0 to 2 percent slopes	21.8	21.3%
0105	Shallow, heavy, silty, clayey, m. phase, 2 to 8 percent slopes	13.1	12.8%
0106	Shallow, heavy, silty, clayey, m. phase, 8 to 15 percent slopes	13.1	12.8%
0107	Shallow, heavy, silty, clayey, m. phase, 15 to 25 percent slopes	36.3	35.5%
0108	Shallow, heavy, silty, clayey, m. phase, 25 to 35 percent slopes	11.3	11.0%
0109	Shallow, heavy, silty, clayey, m. phase, 35 to 45 percent slopes	11.3	11.0%
0110	Shallow, heavy, silty, clayey, m. phase, 45 to 60 percent slopes	11.3	11.0%
0111	Shallow, heavy, silty, clayey, m. phase, 60 to 75 percent slopes	11.3	11.0%
0112	Shallow, heavy, silty, clayey, m. phase, 75 to 90 percent slopes	11.3	11.0%
0113	Shallow, heavy, silty, clayey, m. phase, 90 to 95 percent slopes	11.3	11.0%
0114	Shallow, heavy, silty, clayey, m. phase, 95 to 100 percent slopes	11.3	11.0%
Totals for Area of Interest		128.7	100.0%

180

Hydrology

...“inundated or saturated by surface or ground water at a **frequency and duration**”

- Technical standard of 14 or more consecutive days of flooding or ponding;
- Water table 12 in. or less below soil surface;

181

Hydrology Indicators

Evidence that there is continuing hydrology and confirms that an episode of inundation/saturation occurred recently.

Wetland hydrology indicators are divided into two categories:

- **Primary** – provide stand-alone evidence of a current or recent hydrologic event; and
- **Secondary** – provide evidence of recent hydrology when supported by one or more other hydrology indicators.

182

Hydrology Indicator Groups

- Group A** – direct observation of water
- Group B** – evidence of flooding/ponding
- Group C** – evidence of current or recent saturation.
- Group D** – Landscape and veg. characteristics that indicate contemporary wetland conditions.

183

How do drains work?

184

Methods to monitor hydrology

- Observation of indicators
- Staff gauges
- Open boreholes

Monitoring wells

185

Antecedent Precipitation

To better interpret the data collected or observation made in the proper context.

186

Overview of Wetland Vegetation

- **Hydrophytic Vegetation Definition**
 - Define Hydrophyte
 - What makes a plant a hydrophyte
 - Determine why matters
- **Hydrophytic Vegetation Indicators**
 - Field indicators
 - Indicator status
 - Dominance
- **Determining Hydrophytic Plant Community**
 - Rapids Test
 - 50/20 Rule
 - Prevalence Index

187

187

Vegetation Sampling

5 ft Herbaceous; 15 ft Shrub/Sapling; 30 ft Tree

188

Determining Hydrophytic Vegetation

The procedure for using hydrophytic vegetation indicators is as follows:

1. Apply Indicator 1 (Rapid Test for Hydrophytic Vegetation).
2. Apply Indicator 2 (Dominance Test).
3. Apply Indicator 3 (Prevalence Index). This and the following step assume that at least one indicator of hydric soil and one primary or two secondary indicators of wetland hydrology are present.
4. Apply Indicator 4 (Morphological Adaptations).

189

Hydrophytic Veg.
